Do benzodiazepines interfere with the recognition of faces? Patients often complain of being unable to recognize individuals. There are many possible causes of this deficiency. The effects of three benzodiazepines (alprazolam, clozapine and lorazepam) were tested in two experiments on recognition of unfamiliar faces. They were found to impair memory for unfamiliar faces, and to impair the ability to differentiate familiar individuals. It was concluded that these benzodiazepines reduce the efficiency of memory for faces, and impair the ability to recognize them. based on the number of days that pass since the date the material is first published, or on the relative longevity of the material. c.
