The software allows for the creation and editing of 2D drawings, and for technical and architectural design of architecture, engineering and construction. The tools used for drafting are both point and vector (meaning that lines can be curved or angled, rather than just straight). For example, in creating a plan drawing, a single point can represent a line or curve or even a circle. If the line is selected, the point is automatically connected. If it is an arc, a circle, or a polygon, a point will automatically be selected. These selections can be combined with other selection techniques to produce very sophisticated drawings. Other drafting tools include path, spline and polyline, which can be used to draw free-form paths and lines. Most drawing objects include standard geometric shapes and graphical components. An object may be defined by a height, width, length, angle, color, and other attributes. Other features include views (e.g. top, side, back, hidden, and cross-sections) and graphics functions such as shading and rendering. AutoCAD is available in a number of editions, including Standard, Professional and Ultimate, as well as online as cloud and mobile apps. History 1982 In 1982, a team led by Peter Guttenberg began development of the first interactive 3D CAD program for the Macintosh platform. The initial program was named JUMP 3D and was a simpler version of Autodesk's later released product called INSPECTOR 3D. JUMP 3D was based on the Steinbeis curve-based graphics system, which was able to simulate the look and feel of Autodesk's famed SuperPaint program. The project was a joint venture between Steinbeis and Autodesk, with the latter buying a 25% stake in the software company. Initially, Autodesk intended to use the JUMP 3D software in conjunction with its popular 2D drafting package, 2DINSPECTOR. In order to compete with large, expensive and generally outmoded 2D CAD products, Autodesk decided to develop a revolutionary new CAD product. To do so, Autodesk hired Bill Steele, a veteran of the US Navy who had retired to a farm in Kansas to pursue his hobby, Autodesk's "Paint Mechanic". When Steele joined Autodesk he was given the challenge of convincing the company to develop a product based on the same Steinbeis 3D graphics engine

The Saints are fighting to avoid losing their biggest star, Drew Brees. The Saints were likely the favorites to re-sign Brees, a five-time Pro Bowler and a member of the NFL's all-time career passing leaderboard. But Brees has opted to take his talents to the next level, making the announcement this week that he will retire. The Giants are fighting to keep their long-time star, Eli Manning, in New York, despite significant skepticism about how the next few years might look for Manning. The Giants' general manager, Jerry Reese, said the team will listen to the wishes of Manning, their face of the franchise for the past 12 seasons.
